FOR IMMEDIATE RELEASE

## THE LEWIS MACHINE & TOOL COMPANY INTRODUCES THE LMT CQB GAS PISTON SYSTEM

MILAN, IL (February 2, 2008) – Lewis Machine & Tool Company, an Illinois based company that designs, prototypes, and manufactures small arms, accessories and tooling components for law enforcement, military, commercial manufacturers, and responsible civilians, unveils the latest development for the AR/M4/M16 series of carbines and rifles: the LMT CQB Gas Piston System.

Building on LMT's battle-tested CQB MRP platform the new CQB Gas Piston System runs cooler and cleaner that the standard direct gas impingement systems. The improved piston operating design allows the operator to use a greater variation of ammunition while maintaining the built-in accuracy LMT's systems are known worldwide for. Assembly and disassembly in the field is made quick and easy and operators can even go from a 10.5" barreled 5.56mm CQB carbine to a 16" designated Marksman rifle in less than two minutes, making the CQB Gas Piston System adaptable to any mission.

The bolt carrier is machined in one piece providing the ultimate in strength and reliability. The barrel is free floating and machine gun rated for greater life. All bolts and barrels are mag particle inspected and proof tested. LMT uses a proprietary lubrication that is smoother on the surface and requires less lubrication than other systems. The upper receivers (T) markings are laser engraved so that the operator can see and identify positively in the dark via Night Vision.

Lewis Machine & Tool Company, an ISO 9001:2000 company and GSA supplier since 2005, was founded in 1980 in Milan, Illinois, with the mission of designing and producing the highest quality products for military and government agencies. Lewis Machine & Tool Company, known for their innovative Monolithic Rail Platform, provides customers with the highest standards in design, engineering, and quality assurance in everything they manufacture from custom firearms to accessories.
